

Terracotta Pots

Thélonious Goupil, 2023

vitra.

Designed by Vitra in collaboration with French designer Thélonious Goupil, the Terracotta Pots are made of dense fired clay. The column-like forms of the different sized pots serve as pedestals for the plants they hold, elevating them and giving them more presence in the room.

The Terracotta Pots come in four sizes: XS, S, M and L. The two smaller models are intended for use on tables or display surfaces, while the larger M and L variants are designed to stand on the floor. In addition, the S-sized version exists as a three-part set that can be assembled in different configurations for varied plant arrangements.

The Terracotta Pots are made of natural high-quality clay from Italy, which is pressed into shape and fired. The pots are extremely durable and water-resistant. The inside of the Terracotta Pots is glazed and they come with a drainage hole in the base.

- **Material:** 100% terracotta, glazed finish on the inside, with drainage hole.
