\* NEN-EN13501-1 A2-s1

Satisfying the same criteria as class B for the SBI-test according to EN 13823. In addition, under conditions of a fully developed fire these products will not significantly contribute to the fire load and fire growth.

## Warnings

### General

- Do not use any sharp tools to open the packaging.
- We strongly advise against using power tools.
- Tripping hazard, mind your step.
- Do not put out cigarettes on the parasol.
- Not graffiti proof.
- To avoid danger of suffocation, keep plastic bags away from babies and children.
- Colours can differ over years and from batch to batch.

### Product

- Anchoring the product has to be done by qualified people.
- For anchoring: use suitable bolts or screws from a specialized store depending on the material your terrace is made of.
- Ask for assistance when detaching the fabric in strong winds.
- Store the fabric, when not used for a long time, in the delivered storage bag in a dry environment.
- Do not leave the parasol unattended when mounted.
- The fabric can be removed for washing. In the first place, you should disassemble the fabric when you do not use it and store it inside in the delivered storage bag. This protects the parasol from getting dirty.
- Tests in a wind tunnel have shown that the parasol withstands wind speeds up to 9 on the Beaufort

scale (when anchored to the floor). Still, it is best to disassemble it sooner (from wind speed 6 is the rule of thumb).

### PU-coated polyester

- Shake or brush off loose dirt immediately.
- Do not use any aggressive detergents as they will remove the protective coating of the fabric.
- We strongly advise you not to use a high-pressure hose for cleaning.

### Powder-coating

- White powder-coating requires more maintenance.
- Do not use abrasive scouring powders or scourers as they will scratch the surface.
- Colour can fade to some extent when exposed to UV.
- Flame retarding - NEN-EN13501-1 A2-sl - Satisfying the same criteria as Class B for the SBI-test according to EN13823. In addition, under conditions of a fully developed fire these products will not significantly contribute to the fire load and fire growth.
- Dark colors can get very hot in sunny weather.

### Stainless steel

- Very good UV colour fastness.
- Flame retarding: NEN-EN13501-1 A1 - Class A1 products will not contribute to fire in any stage,

including fully developed fire. For this reason, they are assumed to be capable of satisfying all requirements of all lower classes as well.

- Watch out, stainless steel isn't entirely rustproof! Be sure to avoid contact with iron objects. If it does show signs of rust, clean with rust remover as quickly as possible.

### Galvanised steel

- Galvanisation will become less shiny when used outdoors.
- Flame retarding - NEN-EN13501-1 A1 - Class A1 products will not contribute to fire in any stage, including fully developed fire. For this reason, they are assumed to be capable of satisfying all requirements of all lower classes as well.
- Possible impurities in the immersion tank can cause black marks during galvanization, which are intrinsic to this industrial finishing technique.
- White marks on this zinc layer are also intrinsic to this procedure and will disappear when the furniture is put outdoors.
- This industrial finishing technique may result in a rougher surface. This is intrinsic to the process.

## Applications

**Residential:** In combination with Virus, or as a freestanding version. In your garden or on your terrace.

**Project:** hotel and catering industry, company terraces, event venues, schools, ...

## F.a.q.

**Q: Is the fabric 100% waterproof?**

**A:** Yes, it is a water-repellent polyurethane stretch canopy. The water flows off the parasol thanks to the slightly tilted position.

**Q: Can you remove the fabric for washing?**

**A:** Yes, simply remove the fabric by pulling the loop & wash at 60°. After washing, place the fabric on a frame to dry.

**Q: How resistant is the parasol?**

**A:** Tests in a wind tunnel have shown that the parasol, when anchored to the floor (!), withstands wind speeds up to 9 on the Beaufort scale. However we advise you to take off the fabric from wind speed 6 or whenever it is not in use. As you know, this takes less than a minute, right?

**Q: Do you need to use a parasol cover?**

**A:** No, this is what Acacia is all about. When not used, you simply take off the fabric and put it in the storage bag. What's left is a sculpture!

## Maintenance

Find maintenance instructions at [extremis.com/maintenance](https://extremis.com/maintenance) for:

### PARASOL FABRIC

- Machine washable 60°.
- Do not use chlorine bleach.
- Do not use strong chemical cleaning fluid.
- Tumble dryer at low temperature.
- Do not iron.

### POWDER-COATED PARTS

- White powder-coating obviously requires more maintenance.
- Clean stains with a magic eraser.

### GALVANISED PARTS

- How to repair a damaged zinc layer?

### STAINLESS STEEL

- Clean regularly with a dry cloth and some stainless steel cleaner.

## Website

[www.extremis.com/acacia](https://www.extremis.com/acacia)

## Floor fastening

Acacia can be fixed to floor with bolts.

## Good to know

- Acacia has a shadow surface range of **ø300 cm** and can be directed towards the sun.

- Acacia can be adjusted to 3 different heights.
- The structure can stay outdoors all year round.
- Acacia combines perfectly with Virus.
